Maximum Marks	4 Marks

Empathy Map

An empathy map describes the user from four perspectives - what they say, think, do and feel - in relation to the problem the project addresses. It helps the team build a user-centred solution. The persona below represents the typical EduGenie learner.

• SAYS • "What is the largest ocean?" - I want a quick answer, not ten links. • "Can someone explain this in simple words?" • "Give me a short quiz so I can test myself." • "I do not have time to read all these notes again."		• THINKS • "There must be an easier way to understand this topic." • "Am I ready for the exam, or am I fooling myself?" • "Will the answer I find be reliable?" • "Where should I start if I want to learn SQL properly?"
	KISHORE <i>(Second-year engineering student and self-learner)</i>	
• DOES • Searches the web and opens many tabs to find one answer. • Copies passages from textbooks and websites into notes. • Watches tutorial videos and skips between them. • Looks for practice questions and solves them on his own.		• FEELS • Overwhelmed by too much scattered information. • Anxious about exams and about not knowing his level. • Frustrated when explanations are full of jargon. • Motivated when he gets clear, instant feedback.

Key insight: Kishore needs quick, clear and trustworthy help in one place - answers, simple explanations, practice questions, short summaries and a learning roadmap - which is exactly what EduGenie provides.
